OUTPATIENT REHABILITATION SERVICES

*Nurturing, World-Class
Rehabilitative Care Close
to Home*

*Respect, Excellence, Healing,
Authenticity, Balance*

Outpatient Rehabilitation Services is comprised of physical, occupational, speech therapy professionals, registered nurses and exercise physiologist who tailor services to meet the needs of patients. Specialized services are provided by caregivers with clinical expertise and training in specialty areas of orthopedic therapy, manual therapy, post-stroke rehabilitation, cardiopulmonary rehabilitation and custom splinting.

Movement Disorders Program

Outpatient movement disorders rehabilitation therapy can maximize quality of life and independence. This is recommended for patient with conditions like Amyotrophic Lateral Sclerosis (ALS), Guillain Barre Syndrome (GBS), Huntington's Disease, Multiple Sclerosis (MS) and Parkinson's Disease.

Cardiac Program

Cardiac rehabilitation is designed to improve cardiovascular health, provided during hospitalization or in an outpatient setting. Cardiac rehabilitation is recommended for people with conditions like heart attack, coronary artery disease, valve replacement surgery, angina, coronary angioplasty, heart transplantation, left-ventricular assist device, congestive heart failure.

Vestibular Program

Vestibular rehabilitation is an exercise-based program, designed by a specialty-trained vestibular physical therapist, to improve balance and reduce problems related to dizziness. Vestibular therapy is recommended for people with conditions like dizziness, imbalance, vertigo, Meniere's syndrome, benign paroxysmal positional vertigo (BPPV), neck-related dizziness and migraines, stroke or brain injury or history of frequent falls.

Amputee Program

Amputee reconditioning and limb fitting program offers therapists experienced in helping patients adapt to their new normal and work on overcoming the challenges that arise after an amputation. Support groups help patients assimilate into their environments with ease.

Pulmonary Program

Pulmonary rehabilitation, also known as respiratory rehabilitation, is the management and health maintenance of people with chronic respiratory disease who remain symptomatic or continue to have decreased function despite standard medical treatment. It rebuilds strength through pulmonary rehabilitation programs designed to improve lung function, reduce symptom severity and improve quality of life. Pulmonary rehabilitation is recommended for people with conditions like COPD (chronic obstructive pulmonary disease) including emphysema and chronic bronchitis, interstitial lung disease including sarcoidosis and idiopathic pulmonary fibrosis, Cystic fibrosis, before and after lung surgery, muscle-wasting disorders that may affect the muscles used for breathing like muscular dystrophy.

Stroke Program

Stroke program addresses recovery after patients return home addressing the physical abilities, memory strategies, interpersonal communication and problem solving skills needed for long-term success. Stroke rehabilitation helps patients regain independence and improve quality of life.
